

Acronis® Backup & Recovery™ 10 Online

Your online redundant data store for backup & recovery

Are you doing everything you need to protect your information? Local backup and recovery software may allow you to recover from typical problems such as a mistakenly deleted file, or from a server or workstation crash. But that alone won't protect you from the severe consequences of natural or manufactured disasters that involve the actual destruction of your local IT resources through fire, flood or theft. To survive those onslaughts means investing in an offsite strategy. Fortunately, there's a solution: Acronis® Backup and Recovery™ 10 Online – a fast, secure and cost-efficient offsite data protection service from the leader in local and online disaster recovery. Acronis Backup & Recovery 10 Online provides the redundancy of a remote data store, but without the high price tag.

Acronis Backup & Recovery 10 Online provides an online, remote, secure location so users can store their files and system image backups without any additional hardware investment for remote redundancy of backup files. Unlike other online backup services, Acronis Backup & Recovery 10 Online does more than just protect your files. It leverages Acronis' patented Disk Imaging technology and Cloud technology to protect whole systems, including the operating system and applications. It's a cost-effective online subscription service for workstations and servers – you only pay one flat rate per machine.

Since both Acronis Backup & Recovery 10 Online and Acronis Backup & Recovery 10 are integrated, one console seamlessly manages all of your backup and recovery efforts regardless of the data's actual location.

Main Features

Online, Cloud-based Data Protection

- Remote, secure location to store files and system image backups
- Offsite protection against disaster or theft
- No additional hardware investment required
- For Windows servers and workstations

Recover Entire System, Single File or Folder

- Acronis image-based recoveries give you the granularity you need for any kind of recovery
- Restore files or system images to any server or workstation, eliminating the need to match the underlying hardware

Easy-to-use, Centralized Management

- Single, integrated application for local and offsite backup and recovery needs
- Common policy management and control for local and offsite backup and recovery

Flexible Deployment

- Meet today's data protection challenges and plan for future needs
- Initial disk-based backup and disk-based recovery options are available
- Annual subscriptions of online storage: 250GB for Workstations, 1TB for Servers
- Flexible retention periods depending on your backup and archiving policies
- Integrates with Acronis Backup & Recovery 10 for local backups and fast recoveries

Support for Virtualized Environments

- Provides agent-less backup and recovery of Virtual Machines to the cloud
- Stores Virtual Machine backups in Acronis Online Storage
- Backup data for all Virtual Machines on a VMware® ESX server or Microsoft® Hyper-V server with one Acronis Backup & Recovery 10 Online for Virtual Machines subscription
- Virtual Machines are managed the same way as physical machines (including grouping and policy-based management)

High Level Security

- User authentication and government approved (AES-256) data encryption secure data access and transmissions

Online Backup for Increased Protection

Backup Individual Files or an Entire System Image. Acronis Backup & Recovery 10 Online allows you to backup specific files and folders, virtual machines or an entire system image including the operating system, applications and configuration information. Users can restore these files, virtual machines or system images to any server or workstation, eliminating the need to match the underlying hardware before you can start using them.

Support for Virtualized Environments. Acronis supports the systems you have today with agent-less backup and recovery of virtual machines to the cloud. Virtual Machine backups are stored in Acronis Online Storage when used with Acronis Backup & Recovery 10 Online for Virtual Machines. The annual subscription includes 2TB of online storage, maintenance and unlimited virtual machines per host. And backup data for all virtual machines on a physical VMware ESX server or Microsoft Hyper-V server only requires one Acronis Backup & Recovery 10 Online for Virtual Machines subscription per host. Plus, you manage your Virtual Machines the same way as physical machines from the same management console.

Comprehensive Management & Control. Business users can establish local and online backup policies for workstations and servers from a single, centralized client console. Whether machines are backed up locally using Acronis Backup & Recovery 10, remotely using Acronis Backup & Recovery 10 Online or both, users can manage all of their data protection options from one application.

True Ease of Use. Acronis Backup & Recovery 10 Online is built on Acronis' highly regarded graphical user interface. This user-friendly approach to efficient operation has been continually refined for ease of use for nearly a decade. Existing Acronis Backup & Recovery 10 users will immediately be productive – it's the same great console they already know and love. New users will find Acronis Backup & Recovery 10 Online remarkably easy to configure and use. Even relative novices can create sophisticated, professional backup and recovery plans that ensure they can recover data and whole systems when they're needed.

One console seamlessly manages both local and online backup and recovery efforts regardless of the data's actual location

Government-grade Data Privacy & Security. Data privacy is critical to businesses, and Acronis takes security to the maximum level. Government-approved AES-256 Encryption comes standard with Acronis Backup & Recovery 10 Online. Moreover, each customer has the option (and is strongly encouraged) to create a unique private key which ensures that only that user has access to their business' information. Neither Acronis nor anyone else is able to access your data.

Unparalleled Data Protection Flexibility. The addition of Acronis online data protection gives IT managers the flexibility to balance their need for both local and online data protection on a system-by-system or group-by-group basis without having to carry out time-consuming and costly “fork lift” upgrades to align the two. Acronis supports any one or any combination of these scenarios:

1. Systems that require multiple copies of their information stored in multiple locations
2. Systems that only require local data protection
3. Systems that only require online data protection

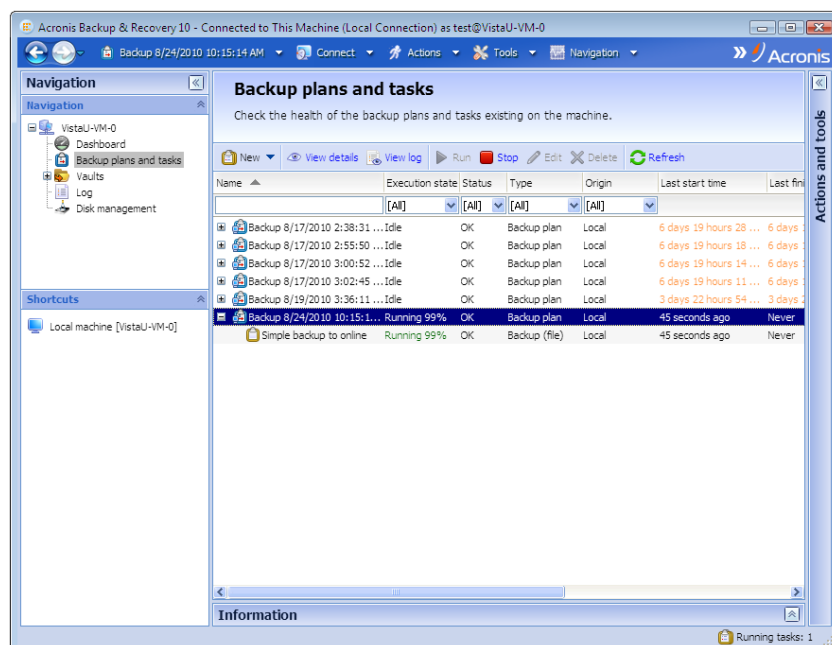

As needs change, IT managers can easily reconfigure any machine or group of machines to match evolving data protection circumstances.

Initial “Seeding” and Large Scale Recovery Options. Acronis recognizes that backing up large servers over the Internet can take days. Acronis offers the ability to create an encrypted local backup and then physically ship an external hard drive to Acronis. This data is then uploaded into your Acronis Online Storage. After the initial backup, only incremental backups are required, which can easily be transmitted over the Internet. Similarly, in the event of a large server outage, customers can call Acronis and Acronis will load a server's backups onto an external hard drive and physically ship it to you. This may be faster than recovering hundreds of gigabytes over the Internet.

Licensing and Installation. Acronis Backup & Recovery 10 Online is available in annual subscriptions of 250GB for workstations, 1TB for servers and 2TB for VMware ESX or Microsoft Hyper-V host. Customers download the client software, register their online account and then begin backing up their workstations and servers to Acronis Online Storage.

Built-in Redundancy. Acronis Online Storage is designed for high availability and scalability distributing customers' data across multiple storage servers.

Acronis® AdvantageSM Premier. The Acronis® AdvantageSM program is an enhanced, multi-level subscription-based support and maintenance program. The first year of Acronis Advantage Premier is included in the license price.
