

# Acronis® Snap Deploy® 3 for PCs

All private and public sector organizations (businesses, schools, federal/state/local governments, etc.) face increasing challenges when configuring and deploying new PC's and workstations in a distributed environment. Having a deployment solution that enables them to use a standard configuration for a new machine will significantly decrease support expenses.

Acronis has a solution to address this need. Acronis Snap Deploy is a comprehensive deployment solution that enables organizations to deploy new PCs and workstations quickly and easily. Using disk-imaging technology that creates a copy of an entire hard disk drive, including the operating system and all applications, it is ideal for rapid bare-metal installations of PCs and workstations.

## Deploy a PC with Acronis Snap Deploy for PCs in 4 easy steps:

1. Create a standard configuration image, including the operating system, applications, and other settings.
2. Create bootable media.
3. Boot the bare PCs you want to deploy with the bootable media, or PXE, enabling the bare systems to connect to the main deployment server.
4. Deployment server begins transfer of the standard configuration to the bare system. Systems are deployed when the transferred image is applied to the target system and the system is booted for the first time. No installation of the operating system or applications is required - the image contains everything the system needs to run.

## Acronis Snap Deploy 3 for PCs Features Include:

- Deploy to different hardware with Acronis Universal Deploy<sup>1</sup>
- Bootable media builder lets you create ISOs and Microsoft Remote Installation Service (RIS) packages
- 64-bit Windows® support
- Deployment Scheduling
- Enhanced PXE server
- Centralized Management Console — manages deployments from one central location
- Multicasting — minimizes deployment time by sending image simultaneously to multiple machines
- Improved Security

Feature	Benefit
Acronis Universal Deploy <sup>1</sup>	Ensure that your new systems will boot by allowing you to add drivers and create templates for specific hardware
New media builder	Facilitate deployment by providing more options for creating bootable media. You can create ISOs, Microsoft Remote Installation Service (RIS) packages, and place multiple configurations on one CD
64-Bit Windows <sup>®</sup> Support	Deploy both new and older systems using one solution
Customizable deployment options	Maximize the performance of new machines by allowing partitions to be resized. Ensure that machines are properly deployed by providing options to reboot or shutdown after the master image is applied
Enhanced PXE server	More easily create a PXE by specifying default configurations and timeout parameters for rebooting new systems
Disk imaging deployment	Fast deployment of new systems because the product enables users to create an image of a system that includes the operating system and applications
Pre-deployment utilities	Easily configure system settings such as network settings, domain/workgroup settings, computer name, user name, and Security Identifier (SID), by applying them to an image before deployment
Multicasting	Minimize deployment time by sending image simultaneously to multiple machines
Wake-on-LAN	Remote boot of server
Wizard-driven Graphical User Interface (GUI)	Easy to use
Image protection	Keep the wrong people out
Flexible licensing	Easier deployment
Self-Deploy	Allows users to re-deploy their own systems

## Acronis<sup>®</sup> Snap Deploy<sup>®</sup> 3 for PCs System Requirements Operating systems for deployment<sup>2</sup>

Windows XP/ 2000/ NT/98/Me/Vista

<sup>1</sup> Acronis Universal Deploy requires a separate add-on license.

<sup>2</sup> Can deploy any OS on an x86-based system with bootable media with the exception of Mac OS X. Acronis supports Master Boot Record basic disks; Mac OS X uses GUID Partition Table disks.
