

PRODUCT SHEET:
CA Enterprise Log Manager

CA Enterprise Log Manager

we can

CA Enterprise Log Manager provides user activity and compliance reporting and investigation for identity, access, and data usage across physical, virtual, and cloud environments. It is designed to effectively verify security controls and streamline reporting and investigation of user and resource access activities to accelerate and simplify compliance and improve efficiencies.

Business value

Government and industry regulations often require not only the implementation of proper security controls but also the ability to demonstrate the effectiveness of those controls. Clearly, the burden of proof rests on the organization to continually verify controls in order to meet regulatory requirements. Reporting and investigating what users do with their access, as well as identifying control weaknesses over time, can be resource-intensive, time-consuming, and costly. Efficient user activity and compliance reporting and investigation is essential. This enables effective controls validation and helps answer key questions that matter to you and your auditors, such as: Who created that user? When was privileged access granted? Who has accessed this data? Did the configuration change? Who changed the configuration?

Product overview

CA Enterprise Log Manager accelerates and simplifies user activity and compliance reporting and investigation. It delivers predefined reports that are already mapped to various regulatory and control frameworks. These reports can be quickly customized, automatically delivered to your auditors, and easily accessible to the CSO alongside other security metrics in your custom web portal. The product provides report trends that can verify the effectiveness of security controls and expose control weaknesses that need to be proactively managed and controlled. Further investigation of policy violations can be completed quickly using visual log analysis tools with granular drill-down capabilities. In addition, a team of CA researchers provides regular, automatic report updates, allowing organizations to keep up with various changing regulatory reporting requirements.

Features

CA Enterprise Log Manager provides a broad range of capabilities to help your organization address its user activity and compliance reporting needs, including:

- **User activity compliance reporting** Provides predefined and customizable reports mapped to common security auditing guidelines and compliance regulations (such as PCI DSS, SOX, HIPAA, FISMA, NERC, and more) that can be emailed and run on schedule or on demand.
- **User activity investigation** Delivers visual log analysis tools with drill-down capabilities that expedite the investigation of user and resource activities and the identification of policy violations.
- **Automatic compliance report updates** Provides regular, automatic content and program updates, including new compliance reports, new queries, product integrations, release upgrades, and more.
- **CA Identity and Access Management (IAM), Spectrum and Mainframe Integrations** CA Enterprise Log Manager helps extend the capabilities of leading CA solutions such as CA IAM (e.g., CA Access Control, RCM, DLP, and more), CA Spectrum and Mainframe systems by delivering integrated user and resource access activity reporting for these solutions.
- **Cloud and virtualization support** Get granular user activity reports for virtualization hosts and guests, as well as for both private and public cloud environments.

Benefits

By automating user activity and compliance reporting processes, CA Enterprise Log Manager helps organizations to:

- **Accelerate and simplify compliance reporting** Provides simple, automated tools that can reduce an overwhelming amount of data into reports with varying levels of detail that are useful to different stakeholders and satisfactory to auditors, and expedites user activity investigation, enabling you to figure out “what happened” quicker and dramatically shorten daily log analysis cycles.
- **Enable continuous compliance** Delivers automatic compliance reporting updates, allowing you to easily keep up with changing regulatory reporting requirements. Provides report trends that can efficiently verify controls on an ongoing basis in the most cost-effective manner.
- **Deliver rapid time to value** Installed and up and running quickly with numerous reports for various regulations available out of the box and easy-to-use report customization wizard.

Delivery approach

CA Services provides a rapid implementation service for CA Enterprise Log Manager delivered through CA internal staff and a network of established partners chosen to help achieve a successful deployment and realize the desired business results as quickly as possible. Through our proven nine-stage methodology, best practices, and expertise, CA can help you achieve faster time-to-value for your product implementation.

Why CA

Effective user activity and compliance reporting and investigation for identity, access, and data usage is imperative to meeting compliance requirements. CA helps verify controls, as well as deliver the security controls that you need. CA Enterprise Log Manager simplifies compliance by providing predefined and customizable reports and accelerates investigations using visual, drill-down log analysis. It allows organizations to keep up with various changing regulatory reporting requirements with automatic compliance report updates. CA Enterprise Log Manager not only integrates with CA IAM products, but other IT and Security Management solutions, helping customers optimize IT for better business results. CA's solutions for mainframe and distributed computing empower organizations to more effectively govern, manage, and secure their IT operations.
