

Symantec Brightmail Antispam 6.0.5

Industry Leading Antispam Solution for Email Security

How It Works

Overview

Symantec Brightmail Antispam combines effective spam catching with a high accuracy rate that prevents false positives. Deployed at the email gateway, this easy-to-manage solution defends against spam, phishing, viruses, and other unwanted email. With flexible spam management capabilities and automated filter updates, it meets enterprise and service provider security needs without imposing a significant administrative burden. Supported by the extensive Symantec Global Intelligence Network, Brightmail Antispam protects over 800 million mailboxes and over 200 service providers globally.

Key Features

- Over 20 different filtering technologies, including proprietary signatures and heuristics

- 97% antispam effectiveness
- Fewer than 1 in a million false positive rate
- Adjustable spam threshold to customize effectiveness and accuracy
- Automated spam filter updates every 5-10 minutes supported by the world's largest Global Intelligence Network
- Antivirus protection scans and cleans messages infected with viruses and mass-mailing worms
- Language-based filters to block non-English language spam
- Web-based control center provides centralized management of multiple servers, role-based administration, and system alerts
- Customized mail policies support flexible actions, such as message markup or quarantine, for different groups of users
- Reporting—Filtering statistics consolidated across all servers, providing visibility on spam filtering performance and trends
- LDAP support for authentication and end user quarantine

Key Benefits

- Award-winning solution leverages multiple technologies, global distributed operations centers, patented spam detection network, and real-time filter delivery mechanism to protect email network

Data Sheet: Messaging Security: Virus and Spam Protection Symantec Brightmail Antispam 6.0.5

- Industry's highest accuracy rate ensures users don't miss important email
- Daily monitoring of accuracy and automatic review of all potential false positives reduce administration overhead
- Frequent and automatic updates provide latest protection and require no tuning or training of filters by administrators
